

Nihal Yadav

Software Engineer – Backend / Full Stack

+91 80888 95784 | Bangalore, Karnataka | varunbb30@gmail.com

GitHub | LinkedIn | LeetCode | Portfolio

SUMMARY

Software Engineer with nearly 2 years of experience building production backend and full-stack systems using **Java, Spring Boot, Python, React, Redis, and SQL**. Built and owned **360Airo**, a production email outreach platform, from architecture through deployment and multi-client production adoption. Experienced in **REST/GraphQL APIs, asynchronous processing, distributed automation, caching, database design, and cloud deployment**, with hands-on ownership of production systems and reliability.

EXPERIENCE

Full Stack Developer & Automation Engineer

Sep 2025 – Present

Globo Persona – Full Time

Bangalore, India

- Architected and built **360Airo**, the company's email outreach and marketing platform, owning backend architecture, database design, deployment, monitoring, and production operations from initial development through multi-client adoption.
- Scaled the platform from **5 to 50+ active accounts** while supporting **100K+ emails/day** through multi-tenant isolation, sender-account pooling, queue-based processing, and horizontally scaled Celery workers.
- Designed and implemented **REST and GraphQL APIs** using Spring Boot and Python for campaigns, contacts, analytics, authentication, input validation, and role-based access control.
- Built asynchronous automation using **Celery and Redis**, implementing retries with backoff, scheduled execution, workload distribution, and fault recovery for large campaign jobs.
- Developed email infrastructure covering **sender warmup, per-domain rate limiting, bounce handling, list validation, and reputation-aware scheduling**, improving deliverability and reducing invalid sends.
- Integrated **OpenAI, Gemini, and Grok APIs** into production content workflows with validation and rule-based checks for AI-generated output before execution.
- Containerized services with **Docker** and deployed production workloads on **AWS EC2/S3**; built React dashboards for CRM and automation workflows. Recognized as **Best Performer across multiple quarters** for technical ownership and delivery.

Software Development Engineer (SDE)

Mar 2025 – Sep 2025

Natgen Tech – Internship

Bangalore, India

- Developed and maintained **Spring Boot REST APIs** supporting core business functionality and integrated backend services with frontend applications.
- Designed relational database schemas, optimized SQL queries, and implemented persistence using **JPA/Hibernate**.
- Contributed to testing, code reviews, debugging, and deployment workflows within an Agile development team.

Java Developer

Feb 2025 – Mar 2025

Reignite Technologies – Internship

Remote

- Developed RESTful APIs using **Spring Boot, Hibernate, and layered architecture** for business applications.
- Designed relational schemas and JPA entity mappings and integrated Spring Boot services with a **React** frontend.

SELECTED PROJECTS

Reddit Competitor Intelligence Analyzer | *Spring Boot, Selenium, MySQL, Redis, Docker*

- Built a competitor-intelligence platform that discovers and analyzes Reddit discussions for target companies, products, and competitors using automated thread and comment collection.
- Automated data collection with **Selenium**, exposed REST APIs for company and analysis workflows, persisted results in MySQL, and used Redis caching to reduce repeated processing.

TechPeek – Technology Stack Detection Chrome Extension | *Chrome Extension, Spring Boot, Selenium, MySQL, Redis*

- Developed a Wappalyzer-style Chrome extension that detects frameworks, libraries, CMS platforms, analytics tools, and hosting technologies used by websites.
- Built a Spring Boot inspection service with Selenium-based analysis and a MySQL technology-signature store; used Redis caching for frequently analyzed domains and Dockerized the backend.

Beehive – Collaborative Developer Workspace | *Spring Boot, WebSockets, MySQL, Redis, Docker*

- Built a collaborative workspace combining project management with real-time communication through **WebSockets**-based live chat and shared project spaces.
- Designed Spring Boot APIs for users, projects, and workspaces with MySQL persistence and Redis-backed sessions, caching, and real-time data handling.

High-Speed URL Scraper | *Python, Multithreading, Pandas, Proxy Rotation*

- Engineered a concurrent scraper that processes XLSX/CSV URL lists, extracts structured data, and exports results using a multithreaded worker pool for high-throughput processing.
- Implemented retry with exponential backoff, randomized headers, proxy rotation, and failure handling for timeouts, connection errors, and blocked requests.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

Backend: Spring Boot, Spring Security, Hibernate/JPA, REST APIs, GraphQL, WebSockets

Frontend: React, Tailwind CSS, Vite

Databases & Distributed Systems: PostgreSQL, MySQL, Redis, Celery, Queues, Asynchronous Processing, Task Scheduling, Multithreading, Multi-Tenant Architecture

Cloud & DevOps: AWS EC2, AWS S3, Docker, VPS Deployment

AI & Automation: OpenAI API, Gemini API, Grok API, Selenium, Whisper, Web Scraping, AI Output Validation

EDUCATION

Sambhram Academy of Management Studies

Bangalore, India

Bachelor of Computer Application (BCA)

2022 – 2025
